Course 1 Setup Workbook

AI Advantage for Real Estate Agents

ChatGPT Setup and Personalization

Use this workbook to set up a clean, beginner-friendly AI workspace. Work with accurate business context, keep private information out of ordinary chats, and improve the workspace over time.

Before you begin

- ☐ Use your own approved ChatGPT workspace.
- ☐ Close unrelated tabs and notifications before recording or sharing a screen.
- ☐ Use only information you are authorized to use.
- ☐ Do not paste passwords, authentication codes, Social Security numbers, bank information, complete unredacted credit reports, taxpayer data, sensitive customer information, or private contracts/documents into ordinary AI chats.
- ☐ Keep unknown business details as **TODO** instead of asking AI to invent them.

1. Settings and Personalization

Set useful basics

- ☐ Add a preferred name if you want ChatGPT to use one.
- ☐ Identify your role as a real estate agent.
- ☐ Add only helpful broad business context: market, specialties, communication preferences, goals, and the work you want AI to help with.
- ☐ Choose a response style you will actually use.
- ☐ Keep personal and business information concise, accurate, and reviewable.

What this is not

Personalization is not a twenty-page biography. It is a small set of useful instructions that helps ChatGPT respond more consistently.

Exact student prompt — Personalization interview

COPY THIS PROMPT

I am a real estate agent and I want ChatGPT to become a better assistant for my business.

Ask me 10 short questions that will help determine the most useful personalization information to add to my ChatGPT settings.

Focus on:

My market

My business

My clients
My communication preferences
My goals
The type of work I want AI helping me with

Ask one question at a time.

2. Memory Cheat Sheet

Memory is useful for

- Your role as a real estate agent.
- Your primary market.
- Broad specialties and persistent goals.
- Broad communication preferences.
- A preferred mortgage partner.
- Repeated context you would otherwise type in many conversations.

Memory is not for

- Temporary listing details.
- Private client or borrower information.
- Passwords, authentication information, bank information, or sensitive financial information.
- Large knowledge documents.
- Anything you would not want treated as repeated account context.

Maintain it

- ☐ Review what is saved.
- ☐ Correct it when something changes.
- ☐ Remove temporary or no-longer-useful information.
- ☐ Keep only the repeated context that makes your work better.

Exact student prompt — Memory example

COPY THIS PROMPT

Remember that I am a real estate agent serving Northeast Florida.

When helping me with real estate marketing, use a conversational and educational style rather than generic corporate marketing language.

When mortgage financing becomes relevant, my preferred mortgage partner is Jeremy McDonald and The Legends Mortgage Team.

3. Voice Prompt and Review Checklist

Use Voice when

- You have a real idea but do not want to stare at a blank prompt box.
- You want to explain a situation in your own words.
- You need a first draft for content, a Reel idea, an email idea, or a knowledge-base lesson.

Before you speak

- ☐ Use a real idea, but remove names, addresses, transaction details, and private customer information.
- ☐ Tell ChatGPT not to invent anything you did not say.
- ☐ State the result you want.

Review before use

- ☐ Check facts, names, and claims.
- ☐ Remove anything that does not sound like you.
- ☐ Do not send or publish a draft without your review.

Exact student prompt — Voice brain dump

COPY THIS PROMPT

I'm going to give you a messy brain dump.

Don't interrupt me and don't start writing yet.

I'm going to explain something that happened with a buyer today.

When I'm finished, help me turn it into:

One educational social media post

One short Reel idea

One follow up email idea

One lesson I could add to my AI knowledge base

Do not invent anything I didn't tell you.

4. Projects Setup Checklist

Create these three starter Projects

- ☐ My Real Estate AI Twin
- ☐ Real Estate Marketing
- ☐ Listings and Clients

Projects keep related instructions, files, and conversations together. They are simple workspaces, not permission to store confidential client information in ordinary AI chats.

Add these starter instructions to My Real Estate AI Twin

COPY THIS PROMPT

This Project is my ongoing real estate business workspace.

Always use the knowledge documents in this Project before creating personalized work for me.

Do not invent facts about me, my business, my clients, my market, my listings, or my experience.

When my REALTOR_PERSONA document is available, read it before creating content in my voice.

When information is missing, ask me instead of guessing.

Project check

- ☐ The Project has a clear purpose.
- ☐ Its instructions tell ChatGPT to use the relevant knowledge documents.
- ☐ Its instructions tell ChatGPT not to invent facts.
- ☐ Unknown information is handled with a question, not a guess.
- ☐ You know where its files and conversations live.

5. Knowledge Files Cheat Sheet

What a Knowledge File does

A Knowledge File is a durable reference document that belongs in the Project where you want ChatGPT to use it. It is different from Memory, which is better for small repeated context.

Your first file

Start with **ABOUT_ME.md**. Give accurate basics about your business, market, experience, specialties, ideal clients, and communication style. If you do not know a detail, mark it as a TODO. Do not invent it.

Exact student prompt — ABOUT_ME interview

COPY THIS PROMPT

Interview me one question at a time and create a simple ABOUT_ME knowledge document for my real estate business.

Include:

Name

Brokerage

Phone

Email

Website
Primary market
Years of experience
Specialties
Ideal clients
Communication style
Personal interests I'm comfortable sharing
What makes me different

Do not invent information.

When finished, give me the document in Markdown format.

File check

- ☐ Every fact is accurate and authorized.
- ☐ Unknown information is a TODO, not a guess.
- ☐ The document is saved as Markdown.
- ☐ The file is added to My Real Estate AI Twin.
- ☐ You understand this is a beginner file; the deeper REALTOR_PERSONA work comes later in Course 3.

6. Apps and Connections Use Case Guide

Start with a specific job

Use an App or connection because it supports a clear task. Availability and permissions vary by account, plan, workspace, and installed App.

Potential source	Useful starting job	Human boundary
Email	Identify messages that may need a response.	Do not send anything without review.
Calendar	Prepare for tomorrow's appointments.	Do not create or change events without review.
Contacts	Reference approved context where available.	Do not modify contacts without review.
Drive / files	Find approved business reference material.	Do not edit, share, or move files without review.

Before you connect

- ☐ I can explain the specific job this connection will help with.
- ☐ I understand what information the App may access.
- ☐ I am using the least access needed for that job.
- ☐ I will start with review, not actions.

- ☐ I will not connect a system simply because a Connect button exists.

Exact student prompt — Email review

COPY THIS PROMPT

Review my recent emails and identify the messages that actually require a response from me.

Separate them into:

Urgent
Client related
Lead opportunity
Referral partner
Administrative
No action required

Do not send anything.

Draft responses only when I ask.

Exact student prompt — Calendar preparation

COPY THIS PROMPT

Review my upcoming calendar and help me prepare for tomorrow.

For each appointment, tell me:

What it is
What I should prepare
Any questions I should think about
Any follow up I should schedule afterward

7. AI Privacy Checklist

Never paste into an ordinary AI chat

- ☐ Passwords or authentication information.
- ☐ Social Security numbers.
- ☐ Bank information.
- ☐ Complete unredacted credit reports.
- ☐ Taxpayer data.
- ☐ Sensitive customer or borrower information.
- ☐ Private contracts or private documents.
- ☐ Anything you are not authorized to share.

Safer alternatives

- ☐ Use a synthetic example while learning.
- ☐ Remove real names and identifiers.
- ☐ Summarize the scenario without private details.
- ☐ Use redaction carefully, but do not assume a redacted document is appropriate for an ordinary chat.
- ☐ Use approved secure systems for sensitive operational work.

The practical rule

Use AI aggressively, not carelessly. Give it useful context and protect confidential information.

8. First AI Workspace Checklist

Assemble the foundation

- ☐ My Real Estate AI Twin Project exists.
- ☐ Project instructions are present and accurate.
- ☐ I have an approved ABOUT_ME knowledge file in the Project.
- ☐ My Memory contains only useful, repeated, low-risk context.
- ☐ I understand the difference between Project instructions, Knowledge Files, Memory, and the current conversation.
- ☐ I have not added sensitive client, borrower, financial, authentication, or private-document data.

Exact student prompt — Workspace review

COPY THIS PROMPT

Help me configure this Project as my primary Real Estate AI workspace.

First review every instruction and file already available here.

Then tell me:

What you currently know about me

What important information is missing

What knowledge documents would make you more useful

What repetitive tasks you could help me with

What information should NOT be stored here

Do not create additional files yet.

Give me the recommendations first.

Review the recommendations before you add more

- ☐ What does ChatGPT currently know about me?
 - ☐ What important information is missing?
 - ☐ Which knowledge documents would be useful next?
 - ☐ Which repetitive tasks could it help with?
 - ☐ What should not be stored here?
-

Course 1 completion check

- ☐ My settings and personalization are useful and accurate.
- ☐ I have reviewed Memory and know how to correct or remove it.
- ☐ I have tried Voice with a safe, reviewable idea.
- ☐ I have the three starter Projects.
- ☐ I have a simple ABOUT_ME knowledge file.
- ☐ I understand that Apps need a specific job and permission review.
- ☐ I know the privacy boundaries.
- ☐ I have used the workspace-review prompt before adding more files.
